

Review Project Description Command

Purpose

This command reviews an updated MITS project task to ensure it complies with all standardization requirements defined in the `mits-project-task-creation-guide.md`.

Parameter

- **First parameter:** The folder name (relative to `test-projects/`) where the updated project is located (e.g., `s17-es2025-module_a-static-website-design`)

Process

1. Read the Guide

First, read `.claude/guide/mits-project-task-creation-guide.md` to understand all requirements and standards.

2. Review Required Files

Thoroughly review the following files in the specified project folder:

- `README.md`
- `project-description.md`
- `metadata.json`
- `marking/marking-scheme.json`

3. Check Against Standards

Verify compliance with the guide, focusing on:

README.md

- Contains project title and short description
- Lists skill domain(s)
- Includes task origin (competition name, year, module, authors)
- Has links to important documents
- Includes MITS project description with Erasmus+ funding and partner information

project-description.md

- Follows exact header hierarchy (`#` title, `##` main sections, `###` subsections, `####` details)
- Contains all required sections in order:
 - Competition time
 - Introduction
 - General Description of Project and Tasks
 - Requirements

- Assessment
- Mark distribution
- Mark distribution table is properly formatted
- All images referenced exist in `assets/project-description-images/`

metadata.json

- Contains all required fields: name, displayName, description, url, skillDomainIds, competition, estTime, authors, technologies, tags
- Data types are correct (arrays, numbers, strings)
- URLs are valid
- Authors have proper structure with name and url

marking/marking-scheme.json

- Valid JSON structure
- Consistent with project requirements
- Points align with mark distribution in project-description.md

Content Quality Checks

Duplicate Content Detection:

- Review all files (especially `project-description.md` and `README.md`) for unnecessary duplicate descriptions
- Identify sections where the same information appears multiple times
- Suggest removal of duplicates while preserving unique information
- Ensure no information loss when consolidating duplicates

Language and Clarity:

- Check for linguistic errors (grammar, spelling, punctuation)
- Identify unclear or confusing sentences
- Flag inconsistent terminology or styling
- Suggest improvements for readability and professionalism
- Verify technical accuracy of descriptions

4. Generate Review Report

Create a `review.md` file in the project folder with:

Structure

```
# Project Review: [Project Name]

## Summary

[Brief overview of review findings]
```

Issues Found

🚫 Critical Issues

[Issues that must be fixed before integration]

⚠️ Important Issues

[Issues that should be addressed but don't block integration]

🟡 Minor Issues

[Nice-to-have improvements and suggestions]

Content Quality Issues

Duplicate Content

[List any duplicate descriptions found and suggest consolidation]

Language and Clarity

[Grammar errors, unclear sentences, styling inconsistencies]

Compliance Checklist

- [] README.md structure
- [] project-description.md header hierarchy
- [] All required sections present
- [] metadata.json valid and complete
- [] marking-scheme.json valid
- [] Assets properly organized
- [] No broken links or references
- [] No unnecessary duplicate content
- [] Clear and grammatically correct language

Recommendations

[Overall suggestions for improvement]

Issue Categorization

- 🚫 **Critical:** Missing required files/sections, invalid JSON, broken structure, incorrect file names, duplicate Level 1 headers, incorrect totalMark values
- ⚠️ **Important:** Incomplete metadata, formatting inconsistencies, missing information, significant duplicate content that causes confusion, unclear technical requirements
- 🟡 **Minor:** Grammar improvements, style suggestions, optimization opportunities, minor duplicate content, small clarity improvements

Content Quality Issues (separate category):

- **Duplicate Content:** Consolidate repeated information while preserving unique details

- **Language and Clarity:** Fix grammar, spelling, unclear sentences, and improve readability

Output

The command creates `review.md` in the project folder with a detailed, actionable review report that includes:

- Structural compliance issues (critical, important, minor)
- Duplicate content analysis with consolidation suggestions
- Language and clarity improvements
- Comprehensive compliance checklist
- Overall recommendations
